Jeep® Patriot EV

- Chrysler's ENVI electric-vehicle technology meets industry's most capable compact SUV
- 400-mile total driving range
- 40-mile all-electric range with zero fuel consumption and zero tailpipe emissions

January 10, 2009, Detroit - Jeep® Patriot EV joins the growing portfolio of electric-drive vehicles being developed by Chrysler LLC.

As a Range-extended Electric Vehicle, the Jeep Patriot EV combines the electric-drive components of an Electric Vehicle with a small gasoline engine and integrated electric generator to produce additional energy to power the electric-drive system when needed. This provides the positive attributes of an Electric Vehicle with the driving range equivalent to today's gasoline-powered vehicles.

"The Jeep Patriot EV expands our portfolio of ENVI electric-drive vehicles and is just one more example of what is possible through the technology Chrysler is developing," said Lou Rhodes, President, – ENVI, and Vice President, Advance Vehicle Engineering, Chrysler LLC. "Moreover, the Patriot EV provides socially responsible, advanced electric technology in the industry's most capable compact SUV."

The Jeep Patriot EV features a refined and clean front appearance to match the refined and clean powertrain. The signature Jeep grille features vertical accents, and the front fascia is a separate component to help set the grille apart. The use of body-color paint, blended with matte black B- and C-pillars, visually creates a smooth and elongated profile.

The unique wheel design and size gives the Jeep Patriot EV a wide stance which combines with the paint treatment to produce a sporty form. The interior of the Jeep Patriot EV features all of the elements introduced in the refreshed 2009 Jeep Patriot.

The Jeep Patriot EV uses an electric-drive motor, advanced lithium-ion battery system and a small gasoline engine with an integrated electric generator to produce additional energy to power the electric-drive system when needed. Range-extended Electric Vehicles provide customers a no-compromise means of dramatically reducing their gasoline use and carbon footprint. The Jeep Patriot EV has a range of 400 miles, including 40 miles of zero fuel-consumption, zero-emissions, all-electric operation.

The Jeep Patriot EV features a new ENVI Green Pearl exterior with a prominent "EV" graphic adorning both sides – top-to-bottom – of the vehicle.
